Excerpt from Treatment of the Diseases of Children

This work has been prepared for the general practitioner of medicine. It has not been written with a view to supplying the needs of either the specialist in children's diseases or the undergraduate student. The possibilities of therapeutic measures in the treatment of children have greatly increased during the past decade; and the author's effort in this volume has been to present to the physician in active general practice, modern methods of management in greater detail than has been attempted by the valuable books already on the market. The means and methods suggested herein are not drawn from the literature, but from experience based upon a somewhat extensive application of the principles evolved by the author in private and hospital practice. This book is offered, therefore, with the hope that it may be of service to other physicians in caring for an important group of their patients.

The author wishes to acknowledge his indebtedness to Dr. James F. McKernon for suggestions in the chapters on the diseases of the ear; to Dr. Thomas L. Bennett for suggestions in the chapter on Anesthetics; to Dr. N. Curtice Holt for the revision of the proof sheets, and to Dr. Royal Storrs Haynes for the arrangement of the index and his valuable assistance in the preparation of the chapter on Drugs and Drug Dosage.
