Kant's Construction of Nature: A Reading of the Metaphysical Foundations of Natural Science

Michael Friedman

Kant's *Metaphysical Foundations of Natural Science* is one of the most difficult but also most important of Kant's works. Published in 1786 between the first (1781) and second (1787) editions of the *Critique of Pure Reason*, the *Metaphysical Foundations* occupies a central place in the development of Kant's philosophy, but has so far attracted relatively little attention compared with other works of Kant's critical period. Michael Friedman's book develops a new and complete reading of this work and reconstructs Kant's main argument clearly and in great detail, explaining its relationship to both Newton's *Principia* and eighteenth-century scientific thinkers such as Euler and Lambert. By situating Kant's text relative to his pre-critical writings on metaphysics and natural philosophy and, in particular, to the changes Kant made in the second edition of the *Critique*, Friedman articulates a radically new perspective on the meaning and development of the critical philosophy as a whole.
