Finite Theory Of The Universe, Dark Matter Disproof And Faster-Than-Light Speed Phil Bouchard

The mathematical representation of General Relativity uses a four dimensional reference frame to position an object in time and space and tells us time is a linear variable that can have both a negative and positive value. This therefore implies time becomes itself a dimension and causes the theory to open doors to ideas such as: singularity, wormhole, paradoxes, etc.

You will learn from this book a new mathematical model that is being suggested which is based on classical mechanics. The theory is objective and predicts low scale GPS gravitational time dilation, perihelion precession disparity, gravitational light bending, artificial faster-than-light motion, up to the rotation curve for all galaxies, natural faster-than-light galactic expansion and even the constitution of a black hole.

You will enjoy how this book shows Einstein to be wrong and how faster-than-light travel is not science-fiction.

The Large Underground Xenon (LUX) failed to detect dark matter. This confirms the veracity of this book and it is the first one challenging this notion.
