1. The Subject Matter. Consider a complex semisimple Lie group G with Lie algebra \mathfrak{g} and Weyl group W . In this book, we present a geometric perspective on the following circle of ideas: polynomials. The "vertices" of this graph are some of the most important objects in representation theory. Each has a theory in its own right, and each has had its own independent historical development. - A nilpotent orbit is an orbit of the adjoint action of G on \mathfrak{g} which contains the zero element of \mathfrak{g} in its closure. (For the special linear group $G = \mathrm{SL}(n, \mathbb{C})$, whose Lie algebra \mathfrak{g} is all $n \times n$ matrices with trace zero, an adjoint orbit consists of all matrices with a given Jordan canonical form; such an orbit is nilpotent if the Jordan form has only zeros on the diagonal. In this case, the nilpotent orbits are classified by partitions of n , given by the sizes of the Jordan blocks.) The closures of the nilpotent orbits are singular in general, and understanding their singularities is an important problem. - The classification of irreducible Weyl group representations is quite old.

Many types of book like here.

Kristopher Lewis:

As a college student exactly feel bored in order to reading. If their teacher expected them to go to the library or to make summary for some guide, they are complained. Just little students that has reading's heart and soul or real their pastime. They just do what the trainer want, like asked to go to the library. They go to generally there but nothing reading significantly. Any students feel that looking at is not important, boring and also can't see colorful images on there. Yeah, it is to be complicated. Book is very important in your case. As we know that on this era, many ways to get whatever we want. Likewise word says, many ways to reach

Chinese's country. Therefore this Nilpotent Orbits, Primitive Ideals, and Characteristic Classes: A Geometric Perspective in Ring Theory (Progress in Mathematics) can make you feel more interested to read.
